3500												X	X	X
4000											X	X	X	X

Key:

This is for a maximum characteristic snow load of 0.8kN/m² or maximum site wind load of 1.0kN/m². More bars may be needed for higher wind and snow loads. Higher specifications can be met on request.
*The customer must ensure that the kerb and surrounding roof can adequately resist the horizontal spread of the lantern.
